

Your objectives

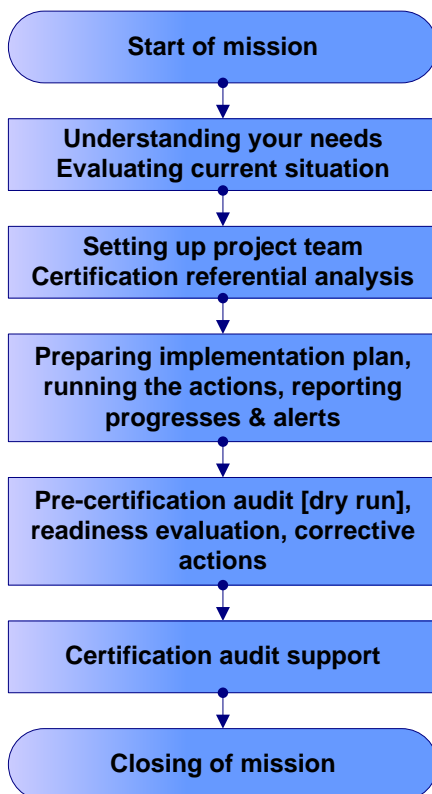

- Are you under a legal constraint to achieve a certification?
- A business partner is requiring you to be certified in order to continue working with him?
- You want to develop a customer offer for which a certification will be necessary?
- You want to improve / streamline your organisation by implementing a certification?

What value are we bringing you ?

- Whatever the reason behind your decision, we can help you implementing your certification!
- Whether you are looking for an ISO, a specific [Seveso, Tapa, Haccp, etc...] or a business partner [Renault-Nissan, IBM, etc...] certification, we can support you.
- We have a long experience of running certification processes, having helped many warehouses and transports organisations to achieve a certification in a logistics environment
- Analysing current situation, the certification referential and preparing / supporting the plan to go from "what is" to the target situation
- Running pre-certification audits to confirm readiness, supporting corrective actions if needed
- Supporting you when the live certification audit is performed

The certification process

- A certification process is conducted like a project
- Once you have decided which type of certification you are aiming for, the first step is to evaluate your current readiness status Vs the referential requirements
- When this is done, you will know what needs to be done in order to meet the requirements of the certification referential
- Depending on the workload, next step is to set up the project team, i.e. the people who will be involved in the preparation work and carrying out the actions required
- Each task / action is assigned to a person in charge with a deadline. During this preparation period, reporting is provided regularly to management to inform on the progresses and, if necessary, the alerts and management decisions needed
- When the work plan is completed, we will run a dry-run, dummy simulation of the real audit to check the readiness of your organisation.
- If problems are detected, we will manage corrective actions
- The day of the certification audit, we will support you and make sure your certification is a success!
